## ABOUT OUR FOUNDER

Amrith Verghese grew up surrounded by a diversity of musical influences that shaped his early fascination with music and eventually, a career in sound engineering.

For many years he participated in different activities, performing live with bands, hanging around the "sound guy" was a way of life. His interest in sound engineering kept growing and so did the passion for developing soundscapes that redefine aural immersion. It was embracing this opportunity that led Amrith to extraordinary results and in becoming an expert in live audio in the UAE today.

Over the past decade, he took upon more complex projects, gained more experience, shaping the sound of some of the most successful Sound and Light Staging companies, and also worked as a Sound System Designer with several respectable projects in the UAE.

What makes Vibe's work deliver results is a keen focus on the client's desired outcome, because helping clients achieve their goals is how we achieve ours.

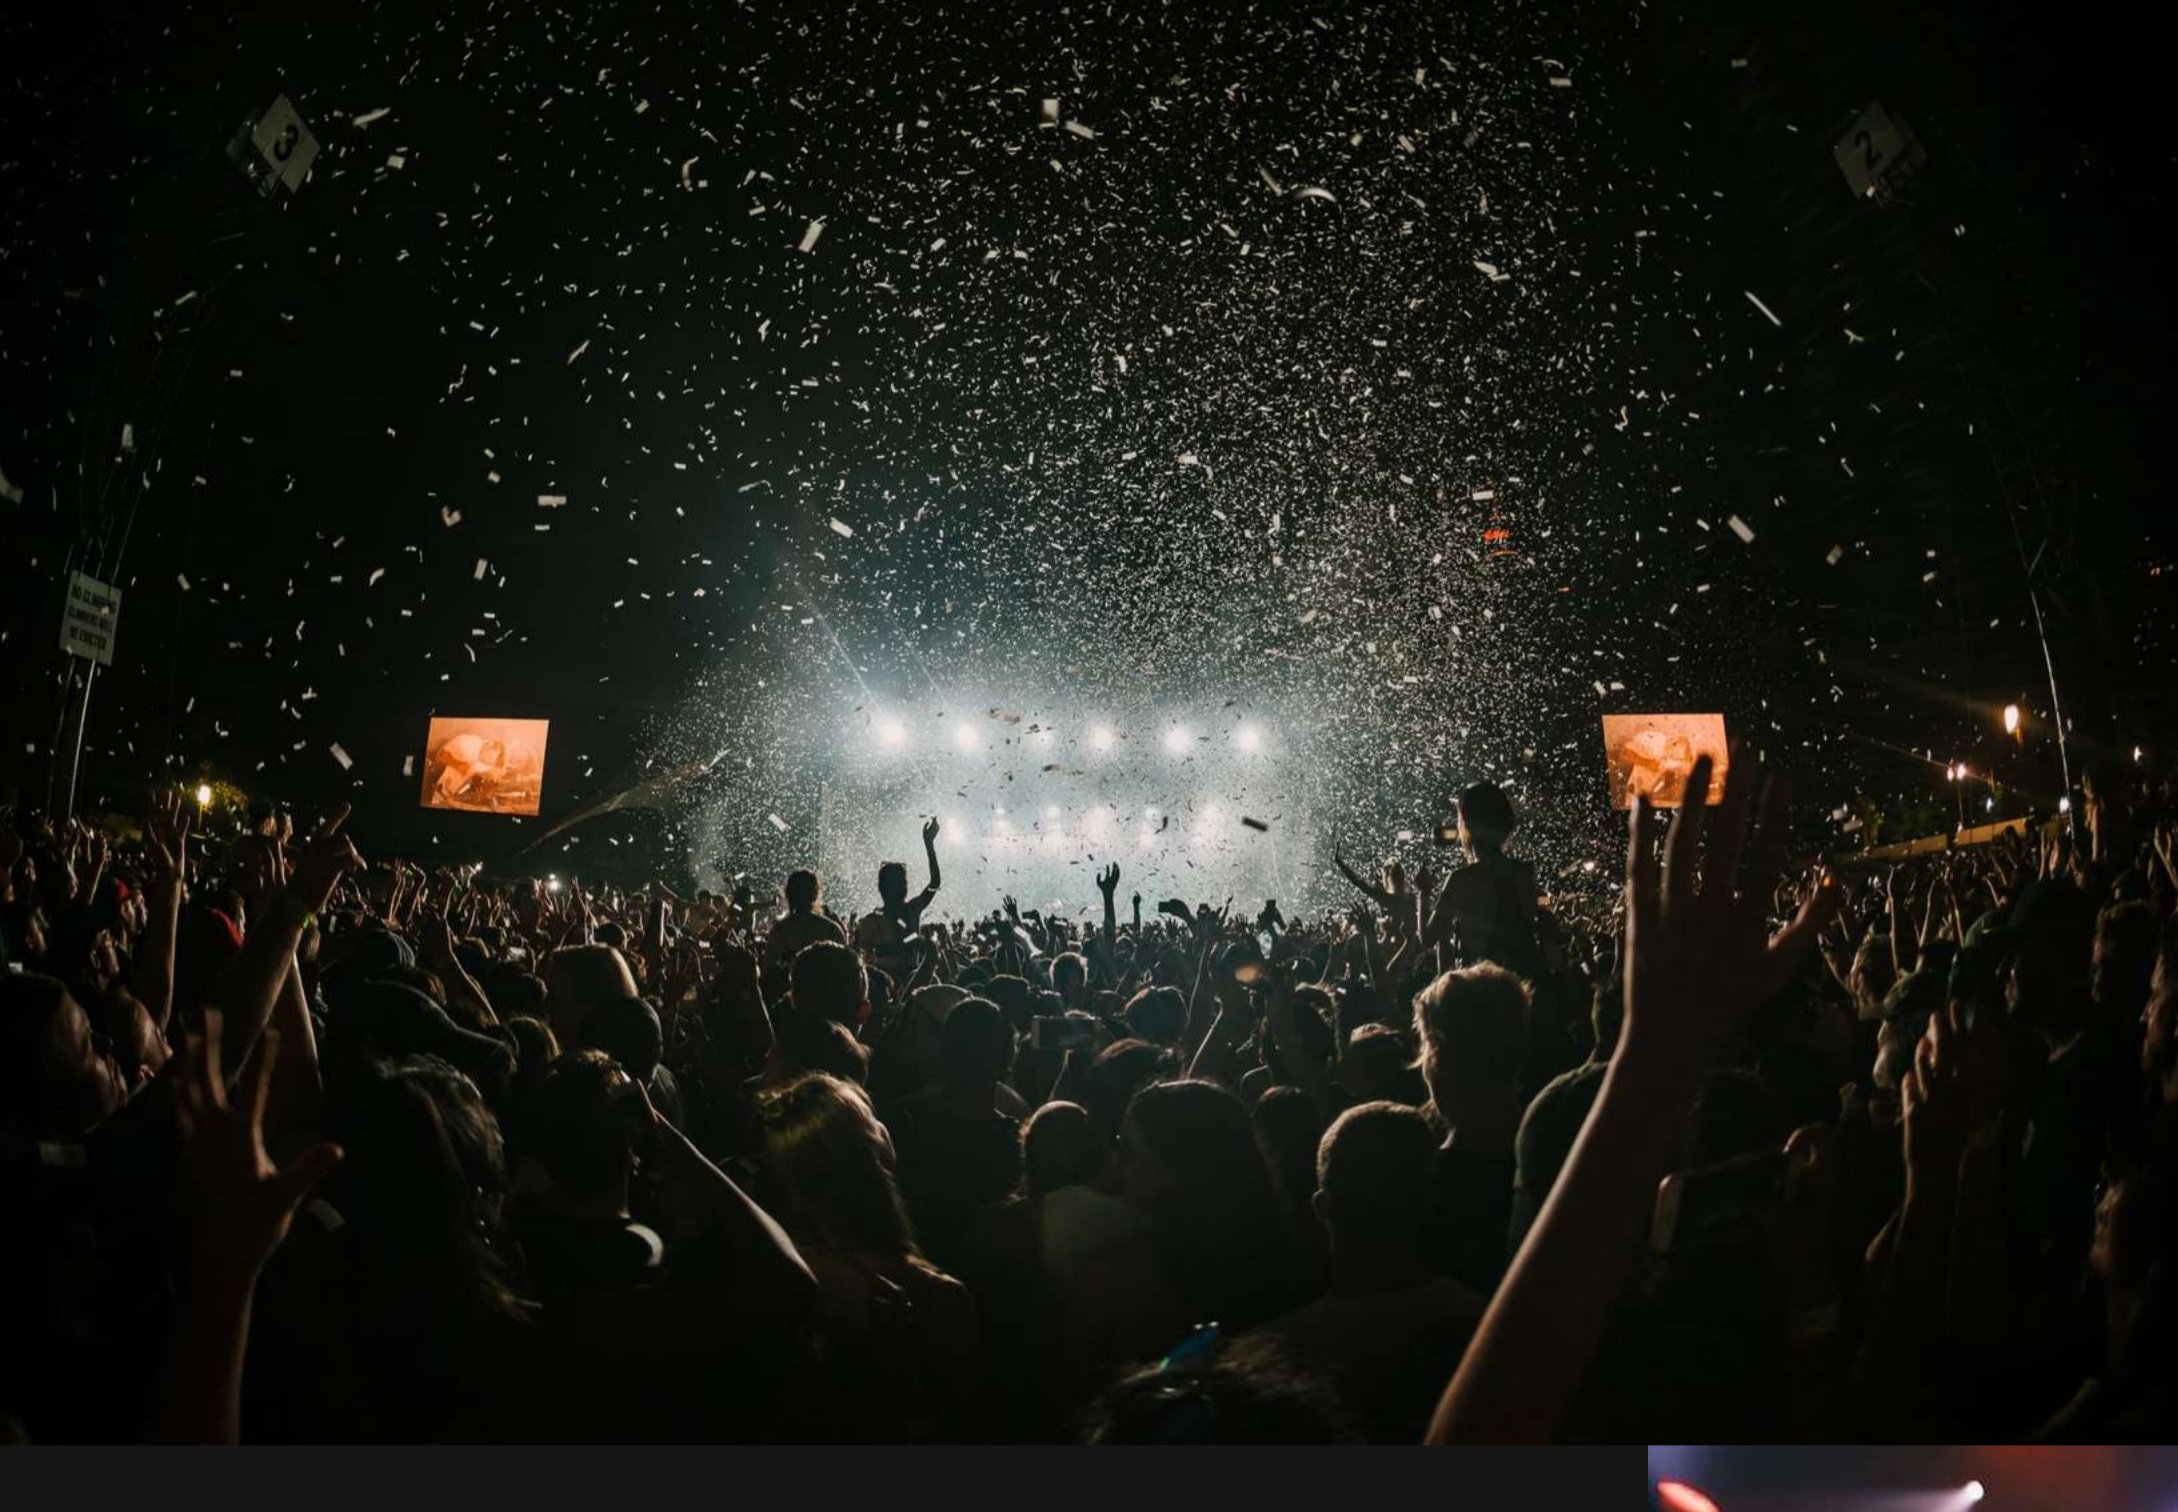

Vibe aims to create and deliver perfection in positive sensory experiences. With knowledge and sincerity, Vibe Audiotech seeks to inspire and positively elevate peoples' lives.

*Amrith Verghese*

## WHY CHOOSE US

With excellence always in mind, we aim to transcend 'the usual' peer offerings, to reach new heights of perfection in the solutions and experiences we provide our customers. We are creative in everything we do and not afraid to experiment and try out new approaches to transcend mediocrity. Aiming to create peak audiovisual impressions, our end-goal is to always enhance and to positively elevate the customer experience. This investment has a direct effect on your Return On Investment.

## LOUNGE BARS AND NIGHTCLUBS

The sound system in any bar or night club can change the way people experience the place. While you want the ravers to enjoy vibrant music, you still want them to be able to hold a conversation and not end up with ear fatigue.

## CONCERT SYSTEM DESIGN

Every person in the audience, no matter where they are, should be able to enjoy the same unparalleled sound experience. At Vibe, we create an audio landscape that delivers the same high quality in tonality and clarity throughout the venue.

## AUDITORIUM

Beyond the technical details and high-performance subtleties, Vibe focuses on forging a soundsystem that enhances the experience of any auditorium.

## SPECIAL PROJECTS

Unique problems require unique solutions and whenever we are faced with an unusual project, that's where our team enjoy their work the most.

## EXPERTISE

Through focussed, passionate expertise, Vibe is recognised and respected for creating enduring value for venues throughout the UAE.

We constantly strive for improvement – by listening, understanding and implementing our knowledge; by seeking solutions and making good ideas even better; and by always going the extra mile.

As a result, we create sincere, lasting relationships – providing sensory perfection to our clients, to their customers and to entertainment industry professionals.

## OUR PROCESS

At the core of our system designs, are high-performance solutions that help you develop far-sighted responses to emerging business challenges. Here's where we infuse physics with the science of sound to make the solutions work for your business. Every solution engineered is designed to make your investment worth it. The end result is a state-of-the-art system that works predictably.

### 01

Firstly, we understand your unique requirement by getting into a detailed discussion, filtering out what's necessary, and then designing a customized system that best fits your requirement.

### 02

Then we separate speculations from reality by letting you experience a small slice of what you are going to receive by organizing a personalized demo of your sound system. We then on, continue to further add improvements until what you receive is a foolproof fit for your requirement.

### 03

Once the design is confirmed and the order is placed, relevant drawings and plans are submitted.

### 04

Next, your personalized plan is put into action, by implementing programming and infrastructure onsite.

### 05

Then we're all ready! Once the site's ready with speakers and other components in place, we start programming and tuning the sound system.

## PORTFOLIO
